

**List:**

1. Write a Python program to sum all the items in a list.
2. Write a Python program to get the largest number from a list.
3. Write a Python program to count the number of strings from a given list of strings. The string length is 2 or more and the first and last characters are the same.

Sample List : ['abc', 'xyz', 'aba', '1221']

4. Write a Python program to remove duplicates from a list.
5. Write a Python program to clone or copy a list.

**Tuple:**

1. Write a Python program to unpack a tuple into several variables.
2. Write a [Python](#) program to convert a tuple to a string.
3. Write a Python program to check whether an element exists within a tuple.

**1 Find Pair with Given Sum****Problem:**

Given a list of integers `nums` and a target integer `target`, return the indices of the two numbers such that they add up to `target`.

Return the indices as a tuple.

**Example:**
